CAS Archive Bridge for Enterprise Vault
An Easier Path to the Future

TRUSTED PROVEN SECURE

MIGRATIONS: WHY TAKE THE RISK?

Potential issues include: Data loss, data leakage, time constraints, budget overruns, 3rd party software licensing, maintaining compliance and chain of custody audit, data integrity verification, data availability during migration, host platform downtime, end user impact (access, search, outages in availability), ediscovery impact (availability and currency of searches during migrations)

WITH MIGRATIONLESS MIGRATION:

- Your data remains where it is, untouched and in its original format

- One go-to location to search/manage all legacy archives, via the CAS advanced archiving platform, synchronously and in real time, including legal hold

- Enormous savings of time effort and cost

- Minimized risk of data loss, data leakage, chain of custody issues

- End-user impact is minimized with transparent access, search, and discovery across all archive sources

FEATURES

- Leave your data where is it and access it from CAS for seamless integration and functionality

- Access all of your archives from a single search / discovery interface

- Intelligent search powered by our machine learning engine for rapid ediscovery culling

- Search and investigate in real-time – no queuing or waiting for results

- Apply and enforce enterprise legal holds to secure and preserve critical data

- Flexible deployment on your premises, hosted, or hybrid

- Support for Enterprise Vault 9, 10 and 11

MIGRATION IS NOT YOUR ONLY OPTION

Today, with questions about the viability of their archive solution provider, many organizations are facing a decision on how to handle their legacy messaging system data. While migration tools are available, these approaches are time consuming, expensive, and not without risk. With terabytes or even petabytes to be managed, an easier approach likely is to leave the data where it is.
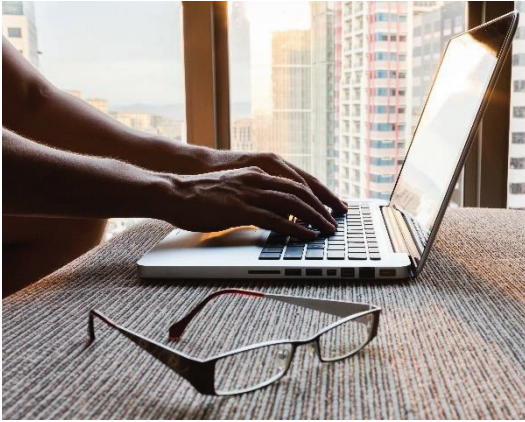

'MIGRATIONLESS' MIGRATION WITH ARCHIVE BRIDGE

The CAS Archive Bridge is a powerful new search connector that is integrated into Capax Archive Solutions' (CAS) release 1.0. The Archive Bridge allows CAS client and discovery applications to query Enterprise Vault directly and retrieve content via all of the primary CAS end-user interfaces for search and eDiscovery. Legacy Enterprise Vault installations remain in place in a static or active mode and are utilized synchronously with CAS 1.0, a 'migration free' move to a new solution!

The CAS Archive Bridge provides open-ended flexibility so that clients have the option to retain search and access of Enterprise Vault data capabilities, in parallel with a new CAS 1.0 deployment or as part of a phased migration away from Enterprise Vault to CAS 1.0. The CAS Archive Bridge removes all of the traditional constraints from the archive migration lifecycle to empower our clients, mitigate risk, and reduce expenditure.

KEY FEATURES

Direct Archive Access – The Archive Bridge connects directly into your existing Enterprise Vault archive, accessing your original data where it resides, complete with proper access control and results accuracy.

A Single Interface for Unified Results - View CAS and Enterprise Vault query results side by side as a consolidated set of search results which can be viewed and filtered dynamically.

ABOUT CAPAX DISCOVERY

Capax Discovery helps its customers reduce information governance costs and risks while maximizing data value. Capax is the industry leader in providing archiving, information management, discovery, and compliance solutions for litigation and regulatory requirements. We have partnered with HP and Microsoft for over a decade to create marquee archiving solutions, compatible with hundreds of different technologies. As the most trusted and secure archiving solution on the market, CAS is backed by our world-class services and technical support, as well as our expertise in migration, consulting, and managed services. Proven software and services you can trust.

LETS TALK

Powerful Search Capabilities – CAS Discovery uses advanced machine learning for rapid cull-down for Unified Early Case Assessments against the entirety of your archive installations. Our rapid-decision interface enables quick straightforward decision making against bulk datasets while displaying a clear decision trail for your peers and the courts, enabling significant cost savings vs. standard keyword list matching. Extensive search options that leverage all key metadata, body and attachment content including message body, date ranges, header information, folder structures and all indexed message attachments for a rich complete repeatable search experience.

Screenshot of unified search results. Icon and results from EV have been indicated in yellow.

Legal Hold Management – Data can be placed on and removed from Legal Hold via CAS regardless of where the data originally was stored.

Support for your End Users - Leverage the search UI within the CAS Outlook Add-in or CAS Web Portal as a typical desktop end-user for access to all of your historical data.

Extensive Supportability - Support for Enterprise Vault versions 9, 10 and 11.

CAS Data Light for legacy data cleanup

Cleanup your old archive with our machine learning engine, CAS Data Light. Obsolete and trivial information can be reduced, saving significantly on storage and data management costs, as well as search time and ediscovery data volumes.

CAS: the Capax Archive Solutions suite

CAS is a complete information governance solution: enterprise-grade, scalable and comprehensive, bringing order to information chaos by putting you in control of your data. CAS includes modules for electronic discovery, compliance, dark data analysis, and audio-video, with hundreds of connectors to all core enterprise technologies and systems.
