Complete Data Lifecycle Management
CAS Policy Editor & CAS Storage Manager

capax | discovery

TRUSTED · PROVEN · SECURE

Comprehensive Archiving & Information Governance

Capax Archive Solutions™ (CAS) provides end-to-end data lifecycle management, giving you granular control over the entire lifespan of data governed by CAS.
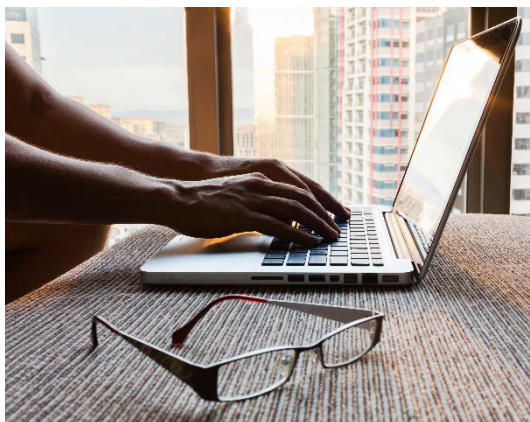

The formula-based CAS Policy Editor provides unsurpassed retention and disposition control. Policies can be as simple as a single universal policy governing all data or as complex as dozens or hundreds of discrete policies to support even the most complex data retention schedules.

And CAS Storage Manager provides automated administration over all of your storage assets. Need to add more storage as your needs grow? CAS Storage Manager makes it easy. Or set automated rules to move or maintain users on different storage assets based on location or department. Or use tiered storage such as secure, higher performance onsite storage for recent data or leverage the scalability, convenience and economics of cloud storage for longer-term archiving. CAS Storage Manager provides unsurpassed flexibility and administration.

FORMULA-BASED CAS POLICY EDITOR

The CAS Policy Editor provides superior control over data's lifecycle with a wizard-driven policy editor option for ease-of-use or, for highly advanced policies, a scripting option is built directly into the editor. Policies can be as simple as "Archive all," or as complex as needed e.g., "Archive only emails from US-based traders when they communicate outside the organization on Tuesdays, and store only on highly-available US-based storage".

ABOUT CAPAX DISCOVERY

Capax Discovery helps its customers reduce information governance costs and risks while maximizing data value. Capax is the industry leader in providing archiving, information management, discovery, and compliance solutions for litigation and regulatory requirements. We have partnered with HP and Microsoft for over a decade to create marquee archiving solutions, compatible with hundreds of different technologies. As the most trusted and secure archiving solution on the market, CAS is backed by our world-class services and technical support, as well as our expertise in migration, consulting, and managed services. Proven software and services you can trust.

AUTOMATED ADMIN WITH CAS STORAGE MANAGER

CAS Storage Manager automates administration of your storage assets. Set automated rules to move or maintain users on different storage based on location or department. And leverage the scalability, convenience, and economics of cloud storage for longer-term archiving.

ENFORCE LEGAL HOLDS

Apply and enforce legal holds to secure and preserve data. Suspend deletion of content for e-discovery via targeted keywords or metadata or simply and easily lock-down the content for an entire custodian or department.

DEFENSIBLE DISPOSITION

Enable defensible disposition of large quantities of data using automated, rule-based categorization and tagging. And evaluate the effectiveness and precision of advanced search strategies, providing additional defensibility and confidence in your deletion and purging activities.

MANAGE EU PRIVACY CONCERNS

Fulfill challenging European Union privacy regulations and other record management needs with the enhanced capabilities and flexibility found only with CAS. Eliminate your risks associated with this new information governance challenge.

CAS Overview

CAS is an enterprise-grade, scalable and comprehensive archive software solution, bringing order to information chaos by putting you in control of your data.

CAS delivers industry-leading information governance for the entire enterprise. Via connectors with dozens of common enterprise technologies, data from across an organization can be rapidly searched, preserved, and managed through its entire lifecycle, using updated features designed to meet today's litigation and regulatory obligations. CAS includes innovative modules for electronic discovery, compliance, dark data analysis, and audio-video.
