

Capax Archive Solutions™

Trusted. Proven. Secure.

FLEXIBLE & SECURE SOFTWARE

Many archive solutions are only available “in the cloud”. But CAS is software you can touch and feel and install on premise with direct control over its management and security. Or deploy CAS in the public cloud of your choice. CAS provides greater flexibility and security than any other solution on the market today.

WITH CAS YOU CAN

- Centrally manage the entire lifecycle of corporate data
- Identify and export data for legal discovery in under 5 minutes
- Uncover and manage your dark data
- Apply and enforce enterprise legal holds to secure and preserve data
- Search in real-time – no queuing or waiting for results
- Flexible deployment on your premises or in the cloud
- Leverage automated intelligence with sophisticated classification and real-time policy management

FEATURES

- Archive universally across all content including social media, audio/video, emails, files, servers, and enterprise systems
- Support for 400+ file types including social media and IM with CAS Live™
- Universal language and format independent
- Browser-based access with CAS Anywhere™
- Supports installations exceeding 1Pb and 100,000 users
- Highly secure data with CAS Encrypted Data Store module
- Trusted by millions of users

Sophisticated Archiving Software Made Simple

Capax Archive Solutions (CAS) delivers industry-leading information governance for the entire enterprise. Data from across an organization can be rapidly searched, preserved, and managed through its entire lifecycle, using updated features designed to meet today’s litigation and regulatory obligations. And CAS takes archiving further by combining the power of a sophisticated granular disposition policy engine with flexible storage management.

CAS OVERVIEW

Archiving has evolved from a tactical IT need to optimize email storage into a corporate requirement for proactive information governance and risk management. CAS is an enterprise-grade, scalable and comprehensive archive solution that cuts chaos by putting you in control of your data.

CAS is a complete information governance solution. CAS includes modules for electronic discovery, compliance, dark data analysis, and audio-video, with connectors to all core enterprise technologies and systems. Gone are the days when separate manual searches are needed to query multiple data repositories across an organization.

CAS benefits from HP’s Intelligent Data Operating Layer™ (IDOL) search technology, the market-leading enterprise information processing platform using Meaning Based Computing technology to form a conceptual and contextual understanding of over 400 file formats.

LEGAL DISCOVERY (CAS DISCOVERY)

Responding to investigations and lawsuits has never been easier with the enhanced discovery capabilities of CAS. CAS Discovery handles critical discovery capabilities including legal holds and early case assessments (ECA). And CAS is one of the first archive solutions on the market to be fully compatible with the new proportionality and other obligations found in the 2015 Federal Rules of Civil Procedure (FRCP) amendments. Legal teams can develop smart discovery strategies by quickly assessing discovery search parameters with sophisticated analysis and reports on discovery volumes and associated costs.

ABOUT CAPAX DISCOVERY

Capax Discovery helps its customers reduce information governance costs and risks while maximizing data value. Capax is the industry leader in providing archiving, information management, discovery, and compliance solutions for litigation and regulatory requirements. We have partnered with HP and Microsoft for over a decade to create marquee archiving solutions, compatible with hundreds of different technologies. As the most trusted and secure archiving solution on the market, CAS is backed by our world-class services and technical support, as well as our expertise in migration, consulting, and managed services. Proven software and services you can trust.

SUPERVISION COMPLIANCE (CAS SUPERVISOR)

CAS delivers sophisticated compliance and supervision capabilities for regulated firms, registered investment advisors, and others facing challenging regulatory obligations. CAS includes automated policy enforcement enabling regulated organizations to enforce supervision and related recordkeeping and data preservation obligations. The CAS Supervision module supports streamlined compliance review with customized email supervision policies and audit trails for compliance with FINRA, SEC and other agencies. CAS Supervisor also features concept searching, automatic categorization, case management, and real-time and post-process monitoring. With CAS, organizations can proactively enforce and monitor adherence to a wide range of regulations and policies.

DATA LIFECYCLE MANAGEMENT

CAS provides end-to-end data lifecycle management, giving you granular control over the birth, life, and death of data governed by CAS. CAS eliminates data silos with connectors to all of the systems common in today's corporate environment, including traditional repositories as well as new cloud and social media technologies. Fulfill challenging EU privacy regulations as well as records management needs with the enhanced capabilities and flexibility found only with CAS.

The formula-based policy editor provides unsurpassed control over data's lifecycle. Use a wizard-driven policy editor option for ease-of-use or create highly advanced policies using a scripting option built directly into the policy editor. Policies can be as simple as a single universal policy governing all data or as complex as dozens or hundreds of discrete policies to support even the most complex data retention schedules.

DARK DATA (CAS DATA LIGHT™)

With CAS DATA LIGHT, uncover and gain access and control over data collections which otherwise are unmanaged or otherwise inaccessible. Bring into the light and make searchable file shares, unorganized repositories and corporate dumping grounds of electronic content. With the many technology connectors available with CAS, crawl and extend management control over those data collections. Enable defensible disposition of large quantities of data using automated, rule-based categorization and tagging.
