1. Introduction

This guide is intended for the first-time users of Netwrix Auditor for SQL Server. It can be used for evaluation purposes, therefore, it is recommended to read it sequentially, and follow the instructions in the order they are provided. After reading this guide you will be able to:

- Install and configure Netwrix Auditor
- Create a Managed Object to start auditing a SQL Server instance
- Launch data collection
- See how Netwrix Auditor brings real AuditIntelligence into your IT infrastructure and enables its complete visibility

NOTE: This guide only covers the basic configuration and usage options for auditing SQL Server with Netwrix Auditor. For advanced installation scenarios and configuration options, as well as for information on various reporting possibilities and other product features, refer to:

- [Netwrix Auditor Installation and Configuration Guide](#)
- [Netwrix Auditor Administrator's Guide](#)
- [Netwrix Auditor User Guide](#)

1.1. Netwrix Auditor Overview

Netwrix Auditor is an IT auditing platform that delivers complete visibility into changes and data access in hybrid cloud IT environments by providing actionable audit data about *who* changed *what*, *when* and *where* each change was made, and *who* has access to *what*. Netwrix Auditor helps organizations prevent security breaches caused by insider attacks, pass compliance audits with far less effort and expense, and keep tabs on what privileged users are doing in the environment.

Netwrix Auditor enables auditing of the broadest variety of IT systems, including Active Directory, Exchange, file servers, SharePoint, SQL Server, VMware and Windows Server. It also supports monitoring of privileged user activity in all other systems, even if they do not produce any logs, by enabling video recording of user screen activity and later search and replay. More than 160,000 IT departments worldwide rely on Netwrix Auditor to secure IT infrastructure, prove compliance and increase operational efficiency. The product has earned over 70 awards from leading industry publications, including SC Magazine, Windows IT Pro, Redmond Magazine and WindowSecurity.com.

Major benefits:

- **Change auditing and alerting:** Netwrix Auditor detects all configuration, content and security changes across your entire IT infrastructure. Reports and real-time alerts include the critical who, what, when and where details, including before and after values, enabling quick and effective

response.

- **AuditIntelligence interactive search:** Netwrix Auditor enables you to easily search through audit data and fine-tune sorting and filtering criteria so you can quickly hone in on exactly the information you need.
- **Configuration assessment:** State-in-time™ reports show configuration settings at any point in time, such as group membership or password policy settings as they were configured a year ago.
- **Access auditing:** Monitoring of and reporting on successful and failed access to systems and data helps keep sensitive data safe.
- **Predefined reports and diagrams:** Netwrix Auditor includes more than 150 predefined reports and diagrams. Reports can be exported to a range of formats, including PDF and XLS, and stakeholders can subscribe to reports to stay informed automatically by email.
- **AuditArchive™:** Netwrix Auditor's scalable two-tiered storage system (file-based + SQL database) holds consolidated audit data for more than 10 years.
- **Unified platform:** Many vendors require multiple standalone tools that are hard to integrate, but Netwrix Auditor is a unified platform that can audit the entire IT infrastructure.

Netwrix Auditor for SQL Server detects and reports on all changes to SQL Server configuration and database content.

2. Netwrix Auditor System Requirements

This section lists the requirements for the systems that are going to be audited with Netwrix Auditor, and for the computer where the product is going to be installed.

2.1. Requirements for Audited System

The table below provides the requirements for the systems that can be audited with Netwrix Auditor for SQL Server:

Audited System	Supported Versions
SQL Server	<ul style="list-style-type: none"> • Microsoft SQL Server 2005 • Microsoft SQL Server 2008 • Microsoft SQL Server 2008 R2 • Microsoft SQL Server 2012 • Microsoft SQL Server 2014

2.2. Requirements to Install Netwrix Auditor

This section provides the requirements for the computer where Netwrix Auditor is going to be installed. Refer to the following sections for detailed information:

- [Hardware Requirements](#)
- [Software Requirements](#)
- [Deployment Options](#)

2.2.1. Hardware Requirements

Before installing Netwrix Auditor, make sure that your hardware meets the following requirements:

Hardware Component	Minimum	Recommended
Processor	Intel or AMD 32 bit, 2 GHz	Intel Core 2 Duo 2x 64 bit, 3 GHz

Hardware Component	Minimum	Recommended
		Preferably a virtual machine
RAM	2 GB	8 GB
Disk space	<ul style="list-style-type: none"> • 500 MB physical disk space for the product installation • 30 GB for the file-based Long-Term Archive • 500 MB for the SQL Server-based Audit Database where audit data is going to be stored <p>NOTE: These are rough estimations, calculated for evaluation of Netwrix Auditor for SQL Server. Refer to Netwrix Auditor Installation and Configuration Guide for complete information on the Netwrix Auditor disk space requirements.</p>	
Screen resolution	1280 x 1024	1920 x 1080 and higher

2.2.2. Software Requirements

The table below lists the minimum software requirements for the Netwrix Auditor installation:

Component	Requirements
Operating system	<ul style="list-style-type: none"> • Windows Desktop OS (64-bit): Windows 7 SP1, Windows 8/8.1 • Windows Server OS (64-bit): Windows Server 2008 R2 SP1, Windows Server 2012/2012 R2
Framework	<ul style="list-style-type: none"> • .Net Framework 3.5 SP1

2.2.3. Deployment Options

Netwrix recommends to deploy Netwrix Auditor on any workstation in the domain where your audited system resides—installation on a domain controller is not recommended.

3. Review Components Checklist

To speed up the evaluation process, Netwrix recommends you to ensure that the following services and components are up and running prior to the Netwrix Auditor installation.

Service or component	Recommendations
Active Directory	Test Active Directory domain connectivity. Make sure your domain controllers are accessible from the computer where you intend to install Netwrix Auditor.
SQL Server 2014 with SSRS (optional step)	<p>Although Netwrix Auditor provides a convenient interface for downloading SQL Server 2014 Express right from Netwrix Auditor Administrator Console, it is recommended to deploy SQL Server instance in advance. Test your SQL Server connectivity.</p> <p>NOTE: Netwrix Auditor provides an option to verify SSRS settings right in the Netwrix Auditor Administrator Console.</p>
Test account	<p>Netwrix recommends you to create a special account with extensive privileges. This account should have sufficient permissions to:</p> <ul style="list-style-type: none"> • Collect audit data. See Configure Data Processing Account Rights and Permissions for more information. • Access data stored in the SQL Server instance: <ul style="list-style-type: none"> • The account must be assigned the Database owner (db_owner) role and the dbcreator server role. • The account must be assigned the Content Manager role on the SSRS Home folder. • Make test changes in your environment.

3.1. Configure Data Processing Account Rights and Permissions

The Data Processing Account is used to collect audit data from the target systems.

In most cases, this account must be a member of the **Domain Admins** group, provided that the workstation with Netwrix Auditor installed and the audited system belong to the same domain.

If the computer where Netwrix Auditor is installed and the audited system belong to different workgroups or domains, the audited system must have accounts with the same name and password as the account under which Netwrix Auditor runs. All these accounts must belong to the **local Administrators** groups.

To ensure successful data collection the Data Processing Account must comply with the following requirements depending on the audited system.

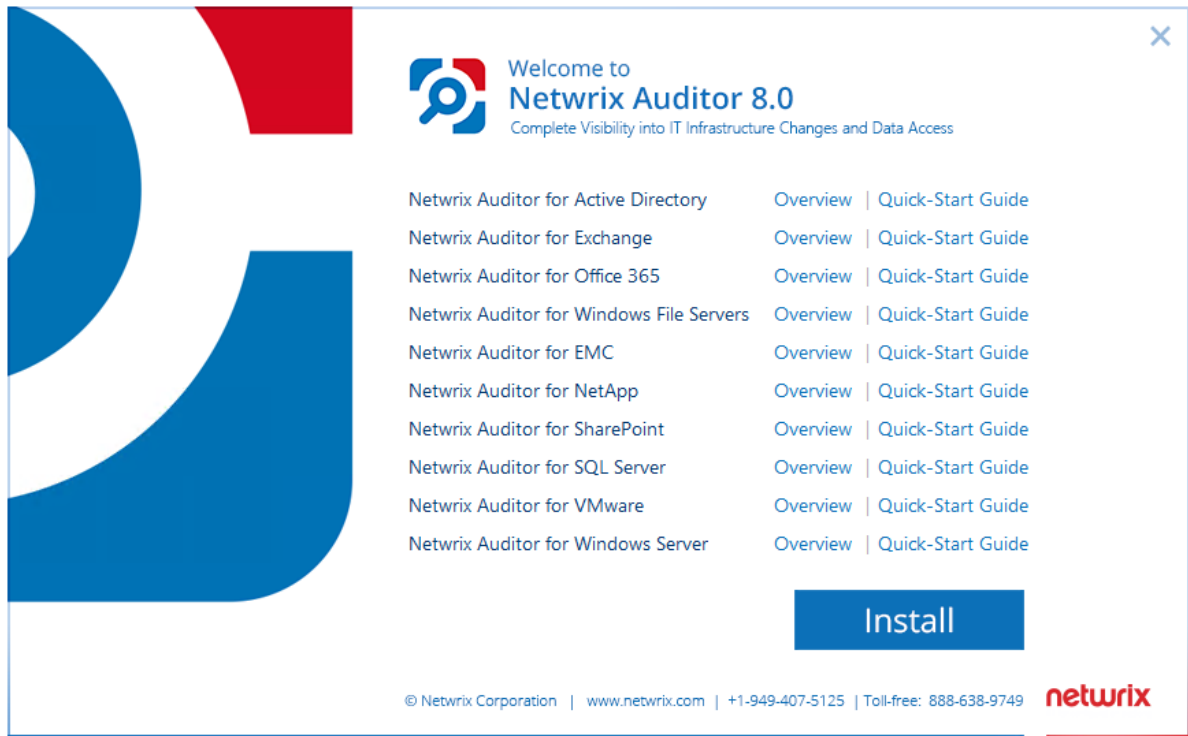

NOTE: The information in this section is outside the quick-start guide scope and is provided for reference only. See [Netwrix Auditor Installation and Configuration Guide](#) for detailed instructions on how to configure your Data Processing Account.

Audited system	Rights and permissions
SQL Server	<ul style="list-style-type: none">• A member of the local Administrators group• The System Administrator role on the target SQL Server <p>If the computer where the product is installed and the audited SQL Server belong to different domains, the audited servers must have accounts with the same name and password as the Data Processing Account. This account must be granted the System Administrator role on the audited SQL Server and be a member of the local Administrators group on the computer where the product is installed.</p> <ul style="list-style-type: none">• The Log on as a batch job policy defined for this account• The Write permission on the folder where the Long-Term Archive is going to be stored (by default <i>C:\ProgramData\Netwrix Auditor\Data</i>)

4. Install the Product

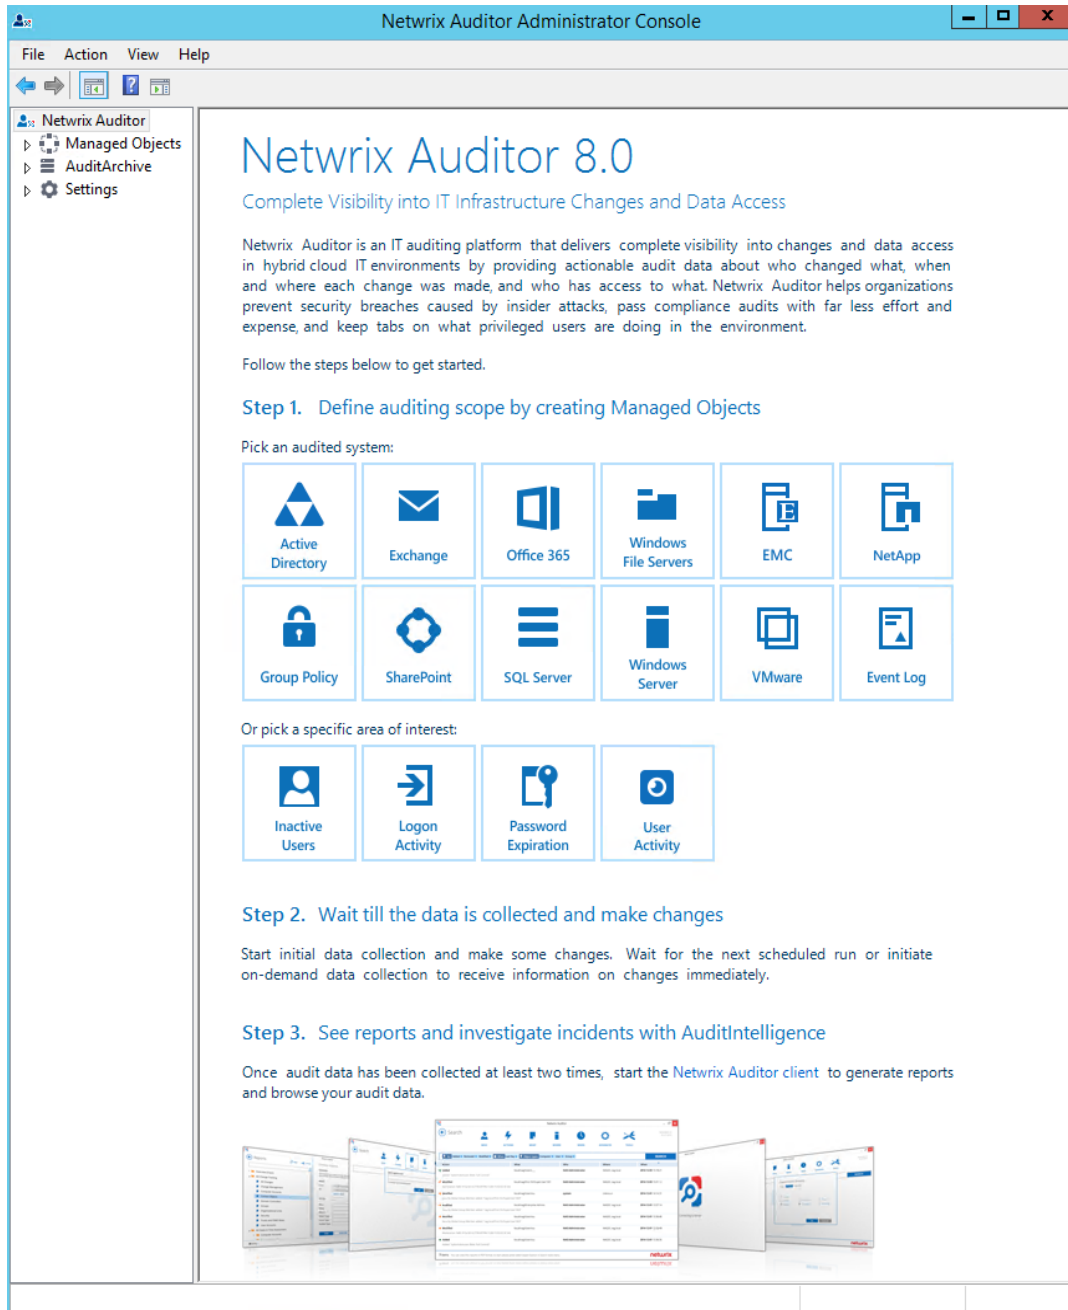

To install Netwrix Auditor

1. [Download](#) Netwrix Auditor 8.0.
2. Unpack the installation package. The following window will be displayed on successful operation completion:

3. Follow the instructions of the setup wizard. When prompted, accept the license agreement.
4. On the **Select Installation Type** step, select **Full installation**.
5. On the **Destination Folder** step, specify the installation folder.
6. Click **Install**.

After a successful installation, Netwrix Auditor shortcuts will be added to the **Start** menu/screen and Netwrix Auditor Administrator Console will open.

5. Create Managed Object to Audit SQL Server

To start auditing your IT Infrastructure with Netwrix Auditor, you must create a Managed Object. A Managed Object is a container within Netwrix Auditor that stores information on the auditing scope, the Data Processing Account used for data collection, Audit Database settings, etc.

Create a Managed Object to audit SQL Server

1. On the main Netwrix Auditor Administrator Console page, click the **SQL Server** tile to launch the **New Managed Object** wizard.
2. On the **Select Managed Object Type** step, select **Computer Collection** as a Managed Object type.
3. On the **Specify Default Data Processing Account** step, click **Specify Account**.

Enter the default Data Processing Account (in the *DOMAIN\user* format) that will be used by Netwrix Auditor for data collection. For a full list of the rights and permissions required for the Data Processing Account, and instructions on how to configure them, refer to [Netwrix Auditor Installation and Configuration Guide](#).

4. On the **Specify Email Settings** step, specify the email settings that will be used for Change Summaries, reports and real-time alerts delivery. Netwrix Auditor automatically detects SMTP settings or you can provide them manually. Complete the following fields:

Setting	Description
SMTP server	Enter your SMTP server name. It can be your company's Exchange server or any public mail server (e.g., Gmail, Yahoo).
Port	Specify your SMTP server port number.
Sender address	Enter the address that will appear in the From field.
	NOTE: It is recommended to click Verify . The system will send a test message to the specified email address and inform you if any problems are detected.
SMTP Authentication	Select this checkbox if your mail server requires the SMTP authentication.
User name	Enter a user name for the SMTP authentication.

Setting	Description
Password	Enter a password for the SMTP authentication.
Confirm password	Confirm the password.
Use Secure Sockets Layer encrypted connection (SSL)	Select this checkbox if your SMTP server requires SSL to be enabled.
Implicit SSL connection mode	Select this checkbox if the implicit SSL mode is used, which means that an SSL connection is established before any meaningful data is sent.

- On the **Specify Computer Collection Name** step, enter the computer collection name.
- On the **Audit Database Settings** step, make sure that the **Make audit data available via summary emails only** checkbox is cleared. By default, the Audit Database is created automatically and is used to store collected audit data.

Select one of the following:

- **Automatically install and configure a new instance of SQL Server Express Edition** to automatically install and configure SQL Server 2014 Express with Advanced Services.
- **Use an existing SQL Server instance with SQL Server Reporting Services** to use an already installed SQL Server instance. Netwrix Auditor detects local SQL Server instance automatically and pre-populates the fields.

Complete the following fields:

Option	Description
SQL Server Settings	
SQL Server instance	Specify the name of the SQL Server instance to store audit data.
Authentication	Select the authentication type you want to use to connect to the SQL Server instance: <ul style="list-style-type: none"> • Windows authentication • SQL Server authentication
User name	Specify the account to be used to connect to the SQL Server instance.

NOTE: This account must be granted the **database owner (db_**

Option	Description
	owner) role and the dbcreator server role. See Netwrix Auditor Installation and Configuration Guide for more information.
Password	Enter a password.
SQL Server Reporting Services Settings	
Report Server URL	Specify the Report Server URL. Make sure that the resource is reachable.
Report Manager URL	Specify the Report Manager URL. Make sure that the resource is reachable.
User name	Specify the account to be used to connect to SSRS.
Password	Enter a password.

7. On the **Add Items to Computer Collection** step, select items that you want to audit. Click **Add**, select an item type and specify a SQL Server instance. You can add several instances to collection.
8. On the **Configure SQL Server Auditing Settings** step, enter your email.
9. On the last step, review your Managed Object settings and make sure **Run data collection now** is enabled. Click **Finish** to exit the wizard. The newly created Managed Object will appear under the **Managed Objects** node.

When a new Managed Object is created, Netwrix Auditor starts collecting data from the audited IT infrastructure. The first data collection runs automatically and gathers information on the audited system's current configuration state. Netwrix Auditor uses this information as a benchmark to collect data on changes. After the first data collection has finished, an email notification is sent to your email stating that the analysis has completed.

6. Make Test Changes

Now that the product has collected a snapshot of the audited system's current configuration state, you can make test changes to see how they will be reported by Netwrix Auditor.

For example, make the following test changes:

- Create a table
- Create a stored procedure

NOTE: Before making any test changes to your environment, ensure that you have the sufficient rights, and that the changes conform to your security policy.

7. See How Netrix Auditor Enables Complete Visibility

After you have made test changes to the audited environment, you can see how Netrix Auditor brings real AuditIntelligence into your IT infrastructure and enables its complete visibility. This section explains how to review your test changes in the Netrix Auditor client and Change Summary.

To launch the Netrix Auditor client

- Navigate to Start → Netrix Auditor.

The screenshot displays the Netrix Auditor 8.0 interface. The title bar reads "Netrix Auditor - STATIONWIN12R2". The main content area is titled "Netrix Auditor 8.0" with the subtitle "Complete Visibility into IT Infrastructure Changes and Data Access". The interface is divided into three main sections: "Launch", "Enterprise Overview", and "Saved Searches".

- Launch:** Contains tiles for "Search", "Reports", and "Subscriptions".
 - Search:** A callout bubble explains: "Search your audit data to investigate who changed what, when, and where across the entire IT infrastructure".
 - Reports:** A callout bubble explains: "Review reports to stay compliant with internal and external security standards".
 - Subscriptions:** A callout bubble explains: "Subscribe to reports to keep track of changes on a regular basis".
- Enterprise Overview:** Contains a line graph and tiles for "Exchange", "Windows File Servers", "EMC", "SQL Server", and "Windows". A callout bubble explains: "See a high-level overview of activity trends by date, user, server, object type or audited system in your IT infrastructure".
- Saved Searches:** Contains a tile for "Active Directory" and a list of saved searches, including "Domain Admins and Administrators groups changes". A callout bubble explains: "Save your favorite searches to access them instantly".

A large "Welcome to the new Netrix Auditor interface!" dialog box is overlaid on the bottom right. It includes the text: "To bring AuditIntelligence to your IT infrastructure faster, read these 5 tips". Below this text is a checkbox labeled "Do not show this tutorial at startup" and an "Ok" button.

At the bottom of the window, the footer contains: "© Netrix Corporation | www.netrix.com | +1-949-407-5125 | Toll-free: 888-638-9749" and the "netrix" logo.

Review the following for additional information:

- [Review a Change Summary](#)
- [Browse Data with AuditIntelligence Search](#)
- [Review SQL Server Overview](#)
- [Review the All SQL Server Changes Report](#)

In order not to wait for a scheduled data collection and a Change Summary generation, launch data collection manually.

To launch data collection manually

1. In the Netwrix Auditor Administrator Console, navigate to **Managed Objects** → **your_Managed_Object_name**.
2. In the right pane, click **Run**.
3. Check your mailbox for an email notification and make sure that the data collection has completed successfully.

7.1. Review a Change Summary

A Change Summary is email that lists all changes that occurred since the last Change Summary delivery. By default, a Change Summary is generated daily at 3:00 AM and delivered to the specified recipients. You can also launch data collection and a Change Summary generation manually.

After the data collection has completed, check your mailbox for a Change Summary and see how your test changes are reported:

Wed 4/22/2015 4:44 AM
administrator@demolab.local
Netwrix Auditor: SQL Server Change Summary - SQLServer
To Administrator

Netwrix Auditor for SQL Server

Change Summary

- Added 2
- Removed 0
- Modified 0

Action	Object Type	What	Where	Who	When	Workstation	Details
■ Added	Table	Databases\sales\Tables\dbo.EmployeeData	demolabsql	DEMOLAB\administrator	4/22/2015 4:41:02 AM	demolabsql	none
■ Added	Stored Procedure	Databases\sales\Stored Procedures\dbo.GetEmployeeDetails	demolabsql	DEMOLAB\administrator	4/22/2015 4:41:39 AM	demolabsql	none

This message was sent by Netwrix Auditor from demolabsql@demolab.local.
www.netwrix.com

The example Change Summary provides the following information:

Column	Description
Action	Shows the type of action that was performed on the object.
Object Type	Shows the type of the object.

Column	Description
What	Shows the name of the changed object or its path.
Where	Shows the name of the SQL Server instance where the change occurred.
Who	Shows the name of the account under which the change was made.
When	Shows the exact time when the change occurred.
Workstation	Shows the name of the computer where the user was logged on when the change was made.
Details	Shows the before and after values of the modified object, object attributes, etc.

7.2. Browse Data with AuditIntelligence Search

Netwrix Auditor delivers complete visibility into your IT infrastructure. Its convenient AuditIntelligence search interface enables you to investigate incidents and browse audit data collected across the entire IT infrastructure. When running a search in Netwrix Auditor, you are not limited to a certain audited system, change type, or object name. You can create flexible searches that provide you with precise results on *who* changed *what*, *when* and *where*.

After collecting initial data, making test changes to your environment and running data collection again, you can take advantage of AuditIntelligence search.

To browse your audit data and see you test changes

1. On the main Netwrix Auditor page, navigate to **Search**.
2. Add search filters to your search by clicking on a corresponding icon and providing a value. By default, all entries that contain this filter value are shown. For an exact match, use quotation marks.

Filters are used to narrow your search results. To create a unique set of filters, you can:

- Add different filters to your search. Search results will be sorted by all selected filters since they work as a logical conjunction (e.g., **Who: Administrator** AND **Action: Added**).
- Specify several values in the same filter to search for any of them (e.g., **Action: Modified** OR **Action: Removed**). To do this, select a filter again and specify a new value.

For example, consider adding these filters:

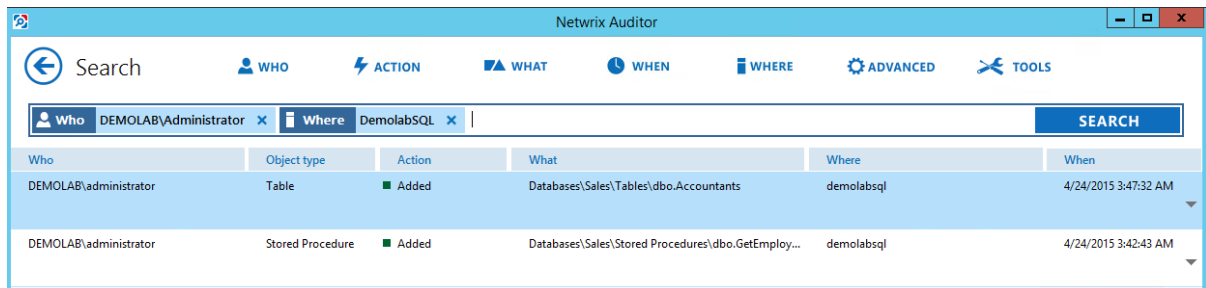

Filter	Value
 WHO	Specify an account you used to connect to your SQL Server instance and make test changes.
 WHERE	Specify your SQL Server instance name.

NOTE: Refer to [Netrix Auditor User Guide](#) for detailed instructions on how to apply filters and change match types.

As a result, you will see the following filters in the **Search** field:

3. Click **Search**.

4. Now, you can narrow your search and modify it right from the search results pane. Double-click any entry that contains excess data, select **Exclude from search** and specify a filter, e.g., **Object type: Table** to leave information on a stored procedure you created.

Who	Object type	Action
DEMOLAB\administrator	Table	■ Added

Exclude from search ▶

Details: No details

Read more...

DEMOLAB\administrator

- Who: DEMOLAB\administrator
- Object type: Table
- Audited system: SQL Server
- Managed object: DEMOLAB computers
- Action: Added
- What: Databases\Sales\Tables\dbo.Account...
- Where: demolabsql
- When: 4/24/2015 3:47:32 AM

Your **Search** field will be updated, the **Object type not** filter will be added. Make sure to click **Search** again to update your search results.

The screenshot shows the Netwrix Auditor search interface. At the top, there are navigation tabs: WHO, ACTION, WHAT, WHEN, WHERE, ADVANCED, and TOOLS. Below these, a search bar contains the following filters: Who: DEMOLAB\Administrator, Where: DemolabsSQL, and Object type not: "Table". A blue SEARCH button is to the right of the filters. Below the search bar, a table displays the search results:

Who	Object type	Action	What	Where	When
DEMOLAB\administrator	Stored Procedure	■ Added	Databases\Sales\Stored Procedures\dbo.GetEm...	demolabsql	4/24/2015 3:42:43 AM

5. Having reviewed your search results, navigate to **Tools**.

- Click **Export data** to save your search results as a *.pdf or *.csv file.
- Click **Save search** to save the selected set of filters. This search will be added to the **Saved Searches** section on the main Netwrix Auditor page, so that you will be able to access it instantly. Refer to [Netwrix Auditor User Guide](#) for detailed instructions on how to create saved searches.

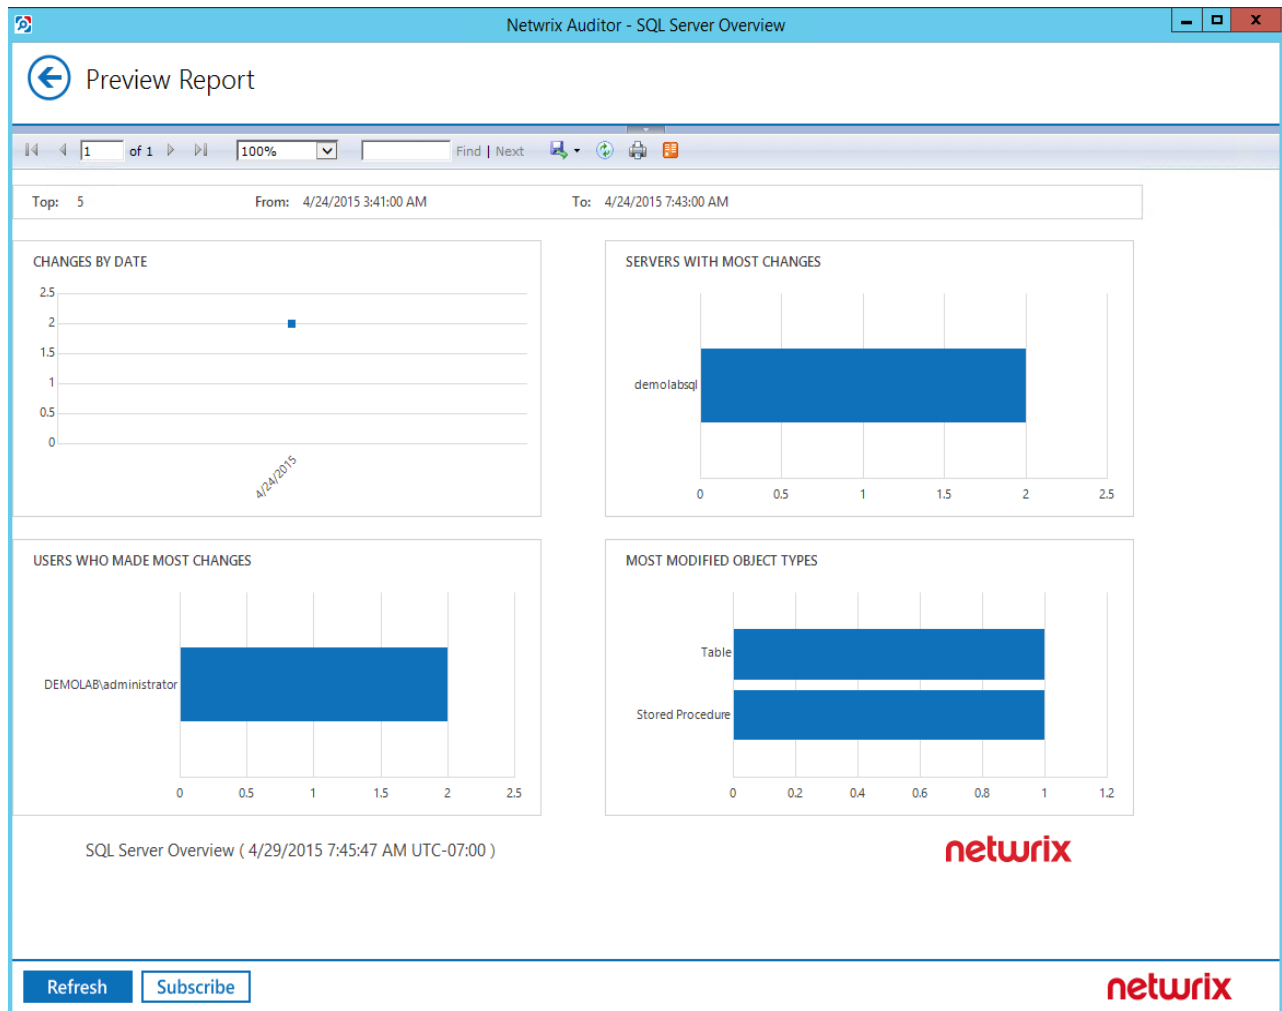

7.3. Review SQL Server Overview

Enterprise Overview provide a high-level overview of activity trends by date, user, server, object type or audited system in your IT infrastructure. The **Enterprise** diagram aggregates data on all Managed Objects and all audited systems, while system-specific diagrams provide quick access to important statistics within one audited system.

After collecting initial data, making test changes to your environment and running data collection again, you can take advantage of the **SQL Server Overview**.

To see how your changes are reported with SQL Server Overview

1. On the main Netrix Auditor page, navigate to the **Enterprise Overview** section.
2. Click the **SQL Server** tile to open it.
3. Review your changes.
4. Click on any chart to jump to a table report with the corresponding grouping and filtering of data.

7.4. Review the All SQL Server Changes Report

Netrix Auditor allows generating audit reports based on Microsoft SQL Server Reporting Services (SSRS). The Netrix Auditor client provides a variety of predefined reports that aggregate data from the entire audited IT infrastructure, an individual system, or a Managed Object.

Change reports can be found under the **Reports** → **SQL Server** and provide a narrower insight into what is going on in the audited infrastructure and help you stay compliant with various standards and regulations (FISMA, HIPAA, PCI, SOX, etc.).

After collecting initial data, making test changes to your environment and running data collection again, you can take advantage of the reports functionality.

To see how your changes are listed in the report

1. In the Netwrix Auditor client, navigate to **Reports** → **SQL Server**.
2. Select the **All SQL Server Changes** report.
3. Click **View** to open the report.

Netwrix Auditor Tuesday, April 21, 2015 5:57 AM

All SQL Server Changes

Shows all changes made to SQL server objects and permissions, including created, modified, and deleted server instances, roles, tables, columns, stored procedures, and all other types of objects. This report can be used for compliance audits to show that all changes are traceable and auditable.

Action	Object Type	What	Who	When
■ Added	Stored Procedure	Databases\sales\Stored Procedures\dbo.GetEmployeeDetails	DEMOLAB\administrator	4/21/2015 5:50:39 AM
Where: demolabsql				
Workstation: demolabsql				
■ Added	Table	Databases\sales\Tables\dbo.Accountants	DEMOLAB\administrator	4/21/2015 5:31:03 AM
Where: demolabsql
